Strategic Review

FY2019: Customer Insights & Trial Evaluation

Prepared for: Julia, Category Manager | August 2026

Quantium Retail Analytics

Agenda

01

Executive Summary

Key findings and recommendations at a glance

02

Category Overview

Customer segments, lifestages, brands & pack sizes driving chip sales

03

Trial Store Performance

Evaluation of the new layout trial across Stores 77, 86 & 88

04

Recommendations & Next Steps

Commercial actions for the next half year

Executive Summary

Who buys chips?

3 Priority Segments

Older Families, Mainstream Young Singles/Couples, and Retirees account for the majority of chip sales and should anchor all category decisions.

What do they buy?

Kettle #1 | 175g Most Popular

Kettle, Smiths & Doritos drive the majority of revenue. The 175g pack dominates all tiers; Budget shoppers over-index on 330g+.

Did the new layout work?

Phased Rollout Recommended

Trial stores 77, 86 & 88 delivered +12–26% sales uplift versus controls, driven primarily by customer acquisition.

However, none of the observed uplifts were statistically significant ($p > 0.05$), and the 3-month trial provides limited statistical power.

A phased rollout is recommended, prioritising Store 77 lookalikes while monitoring longer-term impact.

01

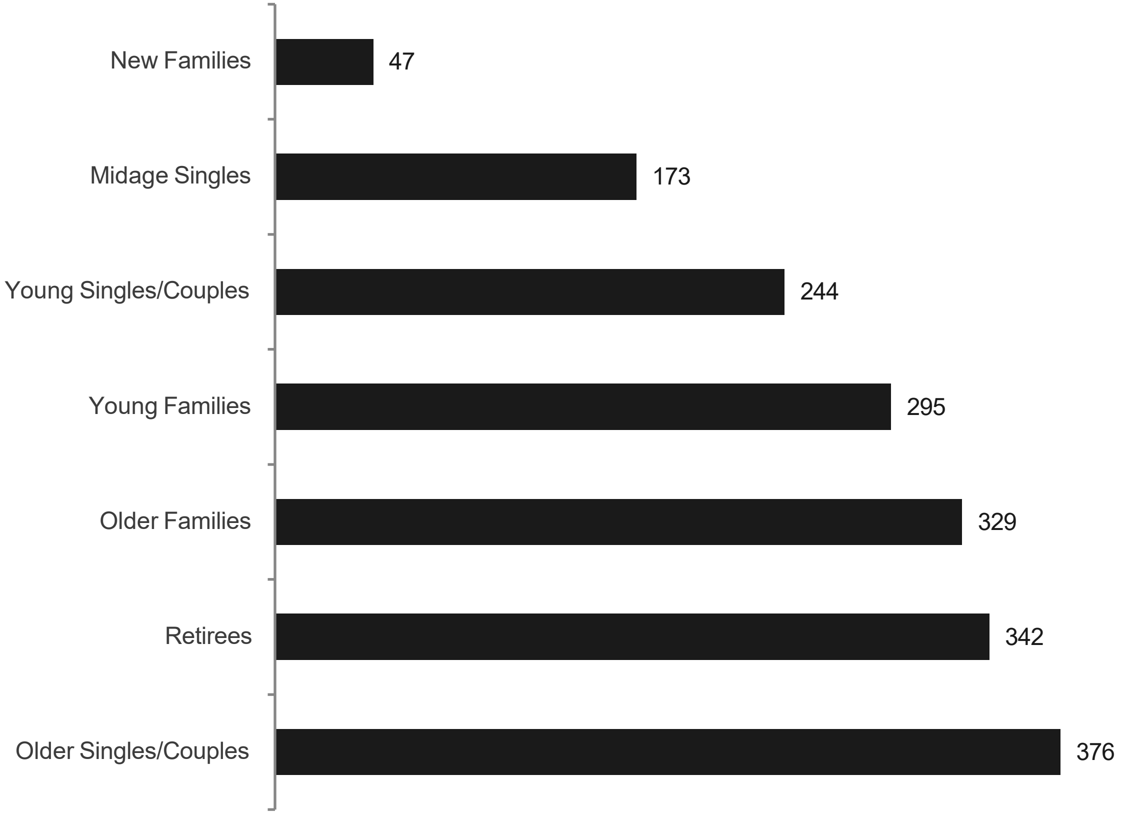
Category Overview

Customer segments, lifestages, brand & pack size analysis

Who buys chips? Lifestage & customer tier breakdown

💡 **Older Families & Retirees dominate spend ($34/customer/yr); Mainstream Young Singles/Couples drive the largest customer headcount at 7,917 unique buyers**

Total Sales by Lifestage ($'000)



Sales Split by Customer Tier

38.8%

Mainstream

Core revenue driver, price & ranging decisions should be anchored here

35.0%

Budget

Strong volume; over-indexes on 330g+ packs and value promotions

26.2%

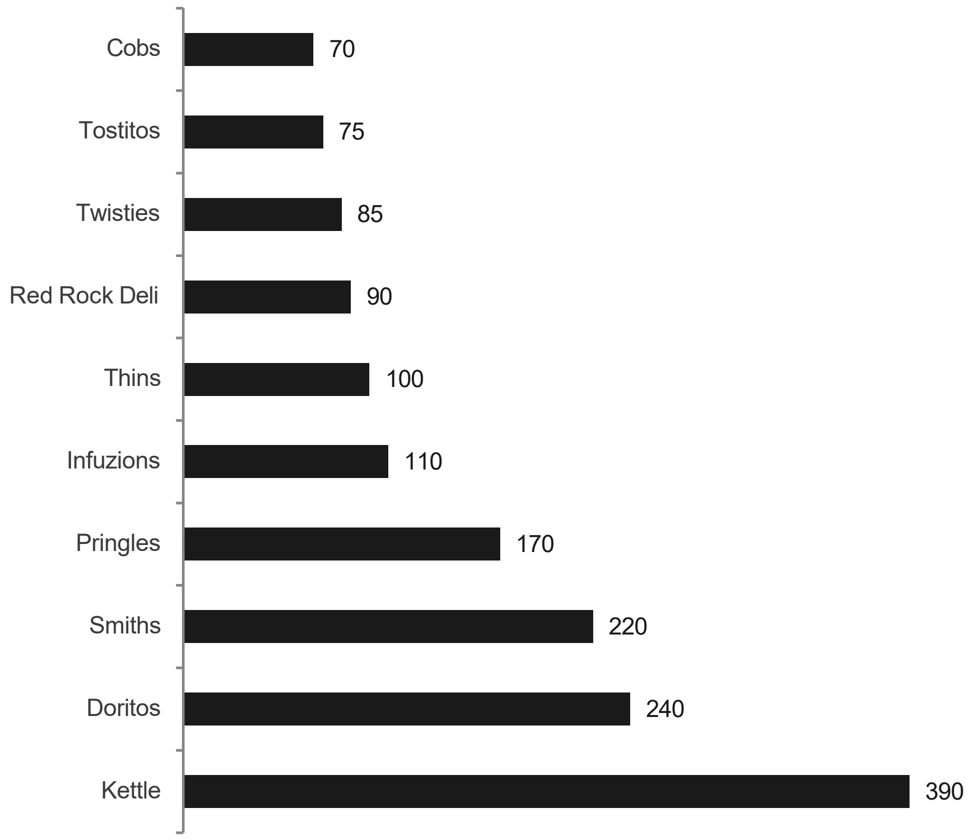
Premium

Smaller pack preference; lower overall spend but margin opportunity

What do they buy? Top brands & preferred pack sizes

💡 **Kettle, Smiths & Doritos account for the majority of chip sales. 175g is the #1 pack across all tiers, prioritise shelf space accordingly**

Top 10 Brands by Total Sales ($'000)



Pack Size Preference, Key Insights

175g

#1 Pack Size

Most popular across ALL customer tiers

330g+

Budget Shoppers

Budget customers over-index significantly on larger packs, target with price promotions

Smaller

Premium Preference

Premium shoppers show slightly stronger preference for smaller, premium-priced packs

02

Trial Store Performance

Evaluating the new in-store chip layout: Stores 77, 86 & 88 vs matched controls

Trial Methodology: How we selected & measured control stores

💡 **Control stores were matched on pre-trial sales trends, customer count & transactions per customer, ensuring a like-for-like comparison**

1

Data

264,834 transactions across 264 stores (Jul 2018–Jun 2019). Monthly aggregations of sales, customers & transactions.

2

Control Selection

Pearson correlation + magnitude distance scoring across 3 metrics. Lowest cumulative rank = best control.

3

Pre-Trial Validation

Visually verified trend alignment over 7 pre-trial months (Jul 2018–Jan 2019) to avoid misleading counterfactuals.

4

Trial Assessment

Scaled control performance to the trial's pre-trial mean and evaluated the 95% confidence interval from residuals.

Results were then assessed using statistical testing.

Due to the short 3-month trial window (n=3), statistical power is limited; observed uplifts should therefore be interpreted as directional rather than conclusive.

Trial Results: Uplift vs Matched Control Stores (Feb–Apr 2019)

💡 **All three trial stores outperformed their controls. The primary driver is customer acquisition, not higher spend per visit, suggesting the new layout improves store appeal & discovery**

Store 77 | Control: 233

PROCEED WITH MONITORED ROLLOUT

Sales Uplift	**+26.2%**
Customer Uplift	**+23.1%**
Txns/Customer	**-2.0%**

Highest sales uplift (+26.2%) and customer uplift (+23.1%). Strongest commercial response, driven primarily by customer acquisition. Prioritise stores with similar profiles for the first rollout phase while monitoring performance.

Store 86 | Control: 155

PHASE ROLLOUT / EXTEND TRIAL

Sales Uplift	**+13.2%**
Customer Uplift	**+13.5%**
Txns/Customer	**+0.7%**

Sales uplift (+13.2%) and customer uplift (+13.5%) were driven primarily by customer acquisition. Phase implementation or extend trial tracking to assess whether the positive trend is sustained.

Store 88 | Control: 125

PHASE ROLLOUT / EXTEND TRIAL

Sales Uplift	**+12.2%**
Customer Uplift	**+10.4%**
Txns/Customer	**+2.8%**

Positive sales (+12.2%) and customer uplift (+10.4%), with a smaller transaction uplift (+2.8%). Include in a later rollout phase with continued performance monitoring.

Recommendations & Next Steps

💡 **Recommendations follow the Pyramid Principle, lead with action, support with evidence from both the category & trial analyses**

R1

Proceed with a phased chain-wide layout rollout

- Begin with stores matching Stores 77's demographic and customer profile, where the strongest commercial uplift was observed (+26.2% sales; +23.1% customers).
- Phase implementation for Stores 86/88 profile or extend trial tracking and continue monitoring post launch performance to assess whether the uplift is sustained.

R2

Focus ranging on Kettle, Smiths & Doritos + ensure 175g pack depth

- These 3 brands drive the majority of chip revenue and must always be in-stock
- Give 175g packs primary shelf position; introduce targeted 330g price promotions for Budget shoppers

R3

Target Older Families & Retirees with multi-pack promotions

- These segments spend ~$34/customer/year, nearly double Young Singles/Couples
- Multi-pack deals, family-size (330g+) and trusted brand names (Kettle, Smiths) will resonate most

R4

Plan December promotional push ahead of the holiday sales peak

- December is consistently the highest-revenue month across all customer segments
- Pre-build inventory, plan end-of-aisle displays and seasonal multi-packs in November

Thank you

Questions & discussion welcome
